Other Information

Additional Information on the Investment Policy

Objectives on Sustainability

The fund's policy is to invest in equities listed on the Stock Exchange of Thailand (SET) and/or Market for Alternative Investments (mai) by focusing on companies with outstanding work on environmental, social and governance (ESG) matters, through a Positive Screening investment selection process that picks constituents of the SETESG Index comprising companies with SET ESG Ratings which assesses the companies' work on environmental, social and governance (ESG) matters. The selection process also involves KTAM's in-house ESG Integration analysis which examines qualitative factors regarding sustainability, environmental and social awareness. Core investments will average no less than 80% of NAV during the financial year.

Target Achievements of the Fund (if any)

The fund aims to invest in companies with outstanding work on Environmental, Social and Governance issues with an aim of generating sustainable returns for unitholders. This is also to increase support for ESG activities which will enable the Thai economy to grow sustainably as well. Simultaneously, this is another mechanism to assist listed companies and Thailand to achieve the Sustainable Development Goals (SDGs) outlined by the United Nations. This effort supports listed companies producing solid work on ESG, while encouraging other companies to focus more on ESG and revamp their corporate ESG policies to improve ESG Ratings.

Investment Universe

Equities listed on the Stock Exchange of Thailand (SET) and/or Market for Alternative Investments (mai) that are constituents of the SETESG Index and selected by KTAM's stock selection criteria.

Investment Benchmark

The SET ESG Total Return Index (SETESG TRI), weighted 100.00%, is an index of listed companies with SET ESG Ratings in the current year, have been trading for at least 6 months, market capitalization is at least 5.0 billion Baht, free float is at least 20% of paid-up capital, and trading volume is at least 0.5% of outstanding shares in at least 9 of the previous 12 months. Investors may obtain more information about the ESG Ratings from <https://setsustainability.com/ESG-ratings>.

Investors may obtain more information about investment policy from the full prospectus.

Definitions

Maximum Drawdown the fund's largest percentage loss over the past 5 years (or since inception if the fund has been operating for less than 5 years) measured from peak NAV/unit to lowest NAV/unit during a decline. The Maximum Drawdown helps provide some indication of the risk of potential loss when investing in the fund.

Recovering Period the time it takes to regain losses; this data provides information about how long it took to climb back from the largest loss to a former peak.

FX Hedging the percentage of foreign investments that are hedged against foreign exchange risk.

Portfolio Turnover illustrates how active the portfolio is traded during a particular period. This is calculated by dividing the value of total purchases in 1 year or the value of total sales in 1 year, whichever is lower, by the fund's average NAV over the same period being measured. A fund with a high Portfolio Turnover ratio denotes that its portfolio managers actively trade the securities in the portfolio; this incurs considerable trading costs which should be taken into consideration in comparison with the performance of fund to ascertain whether the active trading activity is well justified.

Sharpe Ratio the ratio between excess return achieved by the fund compared to investment risks taken. It is determined from the difference between the fund's return and the Risk-Free Rate, compared to the fund's volatility (Standard Deviation). The Sharpe Ratio reflects the excess return the fund generates given its risk exposure. A fund with a higher Sharpe Ratio denotes a better-managed fund since it is able to generate a higher return over a similar risk exposure.

Alpha excess return generated by the fund when compared to its benchmark index. A high Alpha figure illustrates that the fund is able to achieve a higher return than the benchmark due to the fund managers' ability to select good investments and appropriate timing.

Beta magnitude and direction of the performance of securities in the portfolio relative to the market's return. A Beta lower than 1 denotes that the return of the securities in the portfolio is less sensitive to changes in the market's return. A Beta higher than 1 indicates that the return of the securities in the portfolio deviates by a larger magnitude in comparison to changes in the market's return.

Tracking Error the fund's ability to replicate the performance of its benchmark index is measured as Tracking Error. A low figure shows that the fund can efficiently match the benchmark's movement and generate similar performance. A fund with a high tracking error will generally have average returns that deviate from the benchmark index.

Yield to Maturity the return from investment in a fixed income instrument that is held until maturity. It is calculated from the stream of coupon payments to receive in the future plus the principal to be paid back, adjusted into present value terms. It indicates the overall return of a fixed income fund by summing the weighted average Yield to Maturity of each fixed income instrument in the portfolio. Since Yield to Maturity is expressed as a percentage per annum, it can be conveniently used to compare fixed income funds which will hold their debt securities until maturity and have similar investment policies.
