Other information

Investment in a fund is not the same as cash deposits

What are you investing in?

The fund's policy is to invest in local fixed income securities and assets, cash deposits, and/or financial instruments which the asset management company considers good quality with suitable risk/return tradeoff. The fund may also invest in other securities or assets or means of generating financial returns as permitted or endorsed by the Securities and Exchange Commission.

The fund's investment policy is to keep average Portfolio Duration between approximately 1-3 years.

Portfolio strategy: To outperform the benchmark (Active Management)

Who is this fund suitable for?

- An investor seeking higher returns than deposit rates, while able to accept returns that may be lower than equities.
- An investor who requires high liquidity by being able to trade or redeem the units daily and receive payment settlement within T+1.

This fund is **not suitable for**

- An investor who require certainty of investment return or full protection of principal.
- An investor who only wants to invest in good quality fixed income instruments with high liquidity and low price volatility. This fund's investments are not bound by requirements to only invest in such investments as a typical money market fund.

If the fund's policy and risks are still unclear to you

- Read the full prospectus or consult the selling agent or KTAM.
- **Do not invest without fully understanding the fund's characteristics and risks.**

Points to consider

Important

- This fund's investments are not bound by requirements to only invest in low-risk fixed income investments as a typical money market fund. As such, this fund contains higher risks than a money market fund.
- This fund may invest in illiquid instruments, therefore may not always be able to trade its investments within a reasonable time period or price level.
- Investors may invest in this fund through a life-assurance product with a unit-link feature. Contact a life-assurance company (if any) which is a selling agent appointed by KTAM. Study the terms and conditions of the unit-linked life assurance policy before making your decision.
- If there is likelihood that more than two-thirds of the fund's outstanding units would be redeemed, KTAM may use its discretion to dissolve the fund and may reject redemption orders previously received or suspend the acceptance of such orders.

RISK SCALE

Note: The fund's net exposure in cash deposits or equivalents, and general fixed income instruments will be no less than 80% of NAV at all times.

Key investment risks

Glossary

Price volatility or Market Risk stems from changes in the interest rate resulting from factors such as the economic and investment climate, political situation (either domestic or foreign), etc. Prices of debt instruments will shift in the opposite direction as the change in interest rates. For example, if money market rates have a tendency to rise, the yield of new issues in the market will rise as well and the prices of debt securities already in circulation will be traded at lower prices. A fund with a long average portfolio duration will be more sensitive to interest rate changes than a fund with a shorter portfolio duration.

Risk of payment default or Credit Risk can be gauged from the credit ratings of debt instruments invested which assesses the debt servicing ability of the issuer by taking into consideration the issuer's past operating performance and financial strength.

Grade	TRIS	Fitch	Moody's	S&P	Remarks
Investment grade	AAA	AAA(th)	Aaa	AAA	Highest rating denotes <u>lowest risk</u> of default on debt obligations
	AA	AA(th)	Aa	AA	Next highest rating denotes <u>very low</u> risk of default on debt obligations
	A	A(th)	A	A	<u>Low risk</u> of default on debt obligations
	BBB	BBB(th)	Baa	BBB	<u>Moderate risk</u> of default on debt obligations
Non-investment grade	Below BBB	Below BBB(th)	Below BBB	Below BBB	<u>High risk</u> of default on debt obligations

Business Risk refers to uncertainty arising from the financial status or business performance of the issuer which could cause the share price of the company to rise or fall.

Liquidity Risk. Uncertainty regarding the ability to trade some securities within an intended time frame or price level due to limited trading opportunities.

Forward contracts for hedging can be more volatile than the underlying securities themselves. By investing in derivatives, the value of the fund's asset value will have greater price volatility compared to actual holdings in the underlying securities.
